OVERVIEW

Being a Tiger, this is a bike built for adventure. Exploring new roads, even new countries and not stopping just because the road does.

But we made the Tiger Explorer for every rider that wants rugged dependability, long distance comfort, a powerful and torquey engine with an extended fuel range, fine handling and the ability to cope with unmade roads.

And we didn't stop there. We added high levels of sophisticated equipment, including ABS, traction control and cruise control along with the special character that comes with a Triumph three cylinder engine, and handling so natural and easy the bike is just as much at home in town as on the tundra.

ENGINE

Performance

We gave the Explorer a 1215cc three-cylinder engine. Built with the latest technology to be strong, dependable and have the low maintenance levels you need on long adventures. It has plenty of power and torque with a hefty 137PS at 9300rpm, and 121Nm at just 6400rpm. Useable torque low down in the rev range where you need it most.

Not only does the Tiger Explorer boast great power, its engine has an evocative character with a creamy power delivery and unmistakable Triumph growling soundtrack.

Ride-By-Wire

The fuel injection is controlled by a ride-by-wire throttle system using computer control to give you the torque you need in the most efficient, predictable way.

Double Overhead Cams

Double overhead camshafts operate the four valves per cylinder for an engine that does what it was made to do even when the bike is fully loaded with rider, passenger, a full complement of luggage and facing a steep mountain climb.

Shaft Drive

We designed a rugged transmission comprising of a strong six-speed gearbox and an exceptionally tough shaft final drive. This gives you smooth power delivery yet is capable of dealing with the shocks and knocks it can face off-road. And, it hardly needs any maintenance, so you can get on with your ride without worrying about it.

CHASSIS

Frame

We built the tubular steel frame of the Tiger Explorer in the same style as other Triumphs. But it's made extra tough to deal with the stresses of off-road riding and on the road too, where you can load the Tiger Explorer heavily and still ride at high speeds or on badly maintained back roads in full control and comfort.

Suspension

The suspension on the Tiger Explorer is built to cope with any kind of riding condition. We used tough 46mm forks at the front with an extended 190mm of travel, ideal for rough roads and long distance comfort. And at the rear, the single shock provides 194mm of travel and features a hydraulic remote preload adjuster and adjustable rebound damping.

Brakes

Braking is looked after by a pair of 4-piston callipers and twin 305mm discs at the front backed up by a single rear disc, all controlled by our advanced, switchable electronic ABS system.

Handling

The Tiger Explorer is such an easy, natural handling bike. Be it low speed corners or fast sweepers, the Explorer shows outstanding handling manners. The wheelbase is long at 1530mm so you have plenty of room on board and excellent stability.

Riding Position

Comfort is crucial on a bike designed for extended touring trips, so for the Tiger Explorer, we've concentrated on that for both the rider and passenger.

The riding position is perfect. High, upright and dominant with wide bars and plenty of space. Even your passenger gets plenty of space as well as large grab handles for their reassurance and safety.
